# ZAW YE HTET

Full-Stack Software Engineer (Remote|Onsite)

Bangkok, Thailand | +66815900403 | zawyehtet1004@gmail.com | LinkedIn | GitHub

## SUMMARY

Full Stack Developer with expertise in React, Next.js, and Node.js, currently based in Bangkok. Proven track record in optimizing application performance by 20% and stabilizing enterprise ERP systems. Specialized in fullstack development, deployment, and scalable architecture; seeking onsite or remote opportunities in Thailand.

## PROFESSIONAL EXPERIENCE

### FRONTEND DEVELOPER LEAD (Remote, freelancer)

**HexDev** **Nov 2024 – Present, Bangkok**

- Developed and maintained modern web applications using React and Next.js, implementing reusable UI components with shadcn/ui.
- Optimized data fetching and state management by integrating TanStack Query (React Query) for improved application responsiveness.
- Engineered secure request handling and logging mechanisms using Next.js Middleware to enhance system observability and security.
- Improved overall site performance by ~20% through code refactoring, SEO optimization, and efficient rendering strategies.

### ASSOCIATE SOFTWARE ENGINEER (Onsite)

**FRONTIIR Company Limited (Myanmar Net)** **Jul 2023 – Mar 2024, Yangon**

- Contributed to the development of ERP and microservices-based systems using Python and Odoo.
- Collaborated in a microservices environment utilizing Apache Kafka for asynchronous data pipelines, enabling seamless data production and consumption across teams.
- Resolved approximately 40% of reported production bugs, significantly improving system stability and user experience.
- Assisted in maintaining microservices across multiple integrated systems, contributing to ~30% of overall project work.

## SKILLS

HTML5, CSS3, Javascript (ES6+), Typescript, Node.js, React, Next.js, NestJS, Express, MySQL, PostgreSQL, MongoDB, Prisma, TypeORM, Docker, Containerization, CI/CD pipeline, AWS, EC2, REST APIs, GraphQL, Git, Postman, Jira, Gitlab, GitHub

## PROJECTS

### MINGALARROOMS.COM (Property Website Application)

- Built with Node.js, Express, TypeScript, MySQL, and Redis following a clean layered architecture.
- Containerized the application with Docker and Docker Compose for deployment.
- Integrated Stripe for payment processing with webhook event handling.
- Designed and managed database schema with TypeORM migrations across 20+ entities
- Developed a RESTful API backend for a room rental platform connecting landlords.

### Pokémon Search App (Personal Project)

- Built a responsive Pokémon search & collection web app consuming a public GraphQL API with Apollo Client.
- Implemented real-time autocomplete search with keyboard navigation, URL-based pagination, and a persistent favorites system using Zustand + cookie storage.
- Designed modular component architecture with custom hooks, skeleton loading state, and comprehensive error boundaries.

### SAMSUNG – eStoreMyanmar (Digital E-Commerce Platform) – FrontEnd

- Built a Samsung e-commerce microsite using React 19, TypeScript, Vite, Tailwind CSS v4, Zustand, TanStack React Query, React Hook Form + Zod, GA4, and GTM.
- Contributed as a frontend developer, fixing the bug issues on the production and communicated with the backend team for the project.
- Integrated dual analytics tracking (Google Analytics 4 + Google Tag Manager) with custom hooks for e-commerce event tracking (page views, purchases, add-to-cart).
- Refactored 40% of the frontend codebase, improving performance and maintainability.

### NextSound (Music Discovery Platform)

- Built a production-grade music discovery platform integrating Spotify, iTunes, and Deezer through a unified data normalization layer for seamless cross-platform search and playback.
- Engineered a Node.js/Express backend proxy with API key management, rate limiting, input sanitization, and CORS handling to secure credentials and prevent abuse.
- Developed an AI-powered chat assistant using Google Gemini 2.5 Flash with a custom tool-calling system for dynamic music search and natural-language recommendations.
- Implemented full authentication with Supabase (PostgreSQL + RLS), including email registration, password recovery, protected routes, favorites library, and paginated chat history.

### ThuRainStore (Online Store Website)

- Developed a Premium User Experience featuring smooth scrolling via Lenis and high-performance micro-animations utilizing Framer Motion and Tailwind CSS v4.
- Integrated Secure Authentication and Data Management by utilizing Supabase combined with @supabase/ssr for safe, server-side session handling.
- Implemented Global Internationalization (i18n) using next-intl, allowing seamless multi-language support to expand the application's global reach.
- Configured Automated Email Workflows using the Resend API to manage transactional communications effectively.

### zawyehtet-personal-portfolio (Portfolio Website)

- Engineered a highly performant and SEO-friendly personal portfolio using Next.js 16, React 19, and TypeScript, leveraging modern App Router architecture and the React Compiler for optimal render speeds.
- Developed interactive and performant 3D web environments using Three.js and React Three Fiber (R3F), incorporating simulated physics via React Three Rapier to create highly engaging user interactions.
- Implemented complex, fluid UI transitions and scroll-driven animations using Framer Motion and React Spring, paired with Lenis for premium, momentum-based smooth scrolling.

---

## EDUCATION

### Bachelor of Computer Science – B.Sc(Hons)

University of Sunderland – United Kingdom, London • 2026 – 2027 Est

### Dual Diploma in Computing (NCC) – Level 4, 5

KBTC University – Yangon, Myanmar • 2022 – 2025

---

## Additional Information

**Visa Status – DTV (Destination Thailand Visa) • 2025 - 2030 (Exp)**

**Languages – Burmese (native), English (fluent)**
